The Tork Office Hygiene Package – everything you need to secure the new hygiene standard

Tork products
for Offices

COVID-19

As many people now know, COVID-19 can spread through the air via droplets produced when an infected employee coughs or sneezes. It may also spread through close personal contact, or touching surfaces or objects contaminated with the virus. Due to how the virus is spread, facility managers and employees will need to work together to create a safe environment through efforts led by facilities.

Promoting proper hand hygiene and social distancing protocols – including asking those who are sick to stay home; heightened cleaning routines; increased, targeted disinfecting procedures; and optimising dispenser placement in your facility can help reduce the spread of COVID-19.

How can COVID-19 spread in your office building?

**Through the air
by coughing and
sneezing**

**Close personal
contact**

**Touching an object or
surface with the virus
on it, then touching your
mouth, nose or eyes**

Emphasising and optimising hand hygiene

According to a recent global survey amid the pandemic, 21% of respondents admit they still do not wash their hands after blowing their nose.¹ Because 70% of offices have open-plan seating and many high-touch surfaces – such as door handles, light switches and phones – can be contaminated with germs, preventing the spread of the virus that causes COVID-19 can be a challenge.

That's why it's more important than ever to practise proper hand hygiene. Everyone should wash their hands frequently and properly throughout the day, but especially:

- After nose-blowing, coughing or sneezing
- Before and after preparing food and eating
- After using the toilet or touching rubbish
- When they are visibly dirty

Ensure that you provide everyone with a clean, well-stocked handwashing facility with soap and paper hand towels, as well as hand sanitiser in areas where sinks aren't readily available.

You can promote proper hand hygiene in your facility in several ways, including posting signs near the sinks, washrooms and other high-traffic areas in the facility as well as placing sanitisers in frequently visited areas.

Thorough and effective surface cleaning

Because office workers can contract COVID-19 by touching surfaces contaminated with the novel coronavirus, high-touch points should be frequently cleaned and disinfected to help reduce the spread of infection. In fact, 73% of people say they'd feel safer touching objects in public places if they know they had been sanitised properly.² Here are some cleaning tips for different areas within your office building:

- **Overall:** High-traffic areas with surfaces being touched often should be prioritised and cleaned frequently. Use disposable cleaning cloths and change them frequently. Make sure your cleaning staff have effective cleaning equipment and equipment to protect themselves. Make disposable wipes for cleaning available so employees can clean specific areas when needed.
- **Reception:** Wipe high-touch surfaces such as door handles, touchscreens and lift buttons frequently. Keep wiping solutions close by to make cleaning a swift and smooth task.
- **Office:** Because COVID-19 can be transmitted through droplets in the air when people speak, cough or sneeze, limiting the number of people in a facility and promoting proper social distancing can help prevent germ spread.
- **Washrooms:** 81% of people say they expect public washrooms to provide a safe, hygienic environment to a greater extent than before COVID-19.³ Begin cleaning less dirty surfaces and end with the toilet and the floor. Use more than one wipe to prevent spreading germs. Mops and sponges can harbour microorganisms, so cleaners should consider disposable solutions.
- **Breakrooms:** Clean the least dirty surfaces first and the floor last. Greasy or oily surfaces need to be cleaned with hot water and professional cleaning detergents before being sanitised.
